

VMware Horizon 7 Network Ports

* App Volumes Agent for Windows desktops or RDSH (excludes Linux)

† AJP13 is used if your View security server is not configured to use IPsec for communication with the View Connection Server. ESP (Protocol 50) is used when IPsec is enabled.

‡ Access Point does not require pairing with View Connection Server.

¶ See VMware knowledge base article VMware vRealize Operations Manager for Horizon 6.2 Broker Agent fails to pair with the Horizon adapter (2140844) for a list of ports required with vRealize Operations for Horizon.

Note: Network ports to ESXi or external infrastructure (Active Directory) are not included. This diagram illustrates connectivity between VMware components only.
